

Pole Line Hardware

Sidewalk Guy Fitting

Lindsey's Sidewalk guy Fittings are used along sidewalks or near buildings where space is not available for standard guying. The No.2140 Pole Flange takes standard 2" Diameter pipe size. The pipe is held in place by a set screws and is attached to the pole with one 5/8" bolt and two 1/2" lag screws.

The No. 2141 End fitting Guy Clamp mounts on a 2" Diameter pipe. The unique two-piece clamping plate secures one or two guys. Either guy may be removed or adjusted without disturbing the other guy.

Material is 60-45-15 ductile iron, hot dip galvanized.
